Skills

Fast Learner, Problem Solver, Independent Ownership, 0→1 Product Development, Systems Thinking

Tech Stack

Vue/ Nuxt.js, React/Next.js Vite, Tailwind CSS, Node.js, Express.js, REST APIs, PostgreSQL, Supabase, MongoDB, pgvector, OpenAI API, Ollama, LLMs, Agent Systems, Tool Calling, PM2, AWS, Docker, Terraform, Linux, WSL2, Vercel, Railway

Experience

May 2024 - PRESENT

Go Launch Scall - *Founder*

- Built and shipped multiple **0→1 SaaS products** across startup validation, CRM, lead generation, and AI automation using Node.js, Vue/Nuxt, PostgreSQL, Docker, and Vercel.
- Built an **idea validation platform** with structured interview workflows, evidence collection, scoring, and deterministic decision logic backed by PostgreSQL.
- Built a **CRM** with contacts, pipelines, stages, custom fields, tasks, notes, activity tracking, and outreach sequences.
- Designed and built an **AI agent platform** with autonomous loops, tool calling, artifacts, workspace context, persistent knowledge, and LLM interactions.
- Designed reusable **agent, tool, artifact, goal, and workflow abstractions** for composable AI workflows, with execution handled by the runtime.
- Built **AI-powered automation pipelines** for Reddit lead generation and job search, covering ingestion, LLM extraction/scoring, validation, normalization, and analysis using **Ollama**.
- Owned products end-to-end, from **architecture, database design, and backend APIs to frontend development, automation, deployment, and debugging**.

Education

2017 - 2021

DCRUST, Murthal - B Tech

Projects

AI Agent Platform - work in progress [LINK](#)

- Built a custom **agent runtime** supporting autonomous execution loops, tool calling, LLM interaction, and structured artifact generation.
- Designed metadata-driven abstractions for **agents, tools, artifacts, goals, workflows, and workspace knowledge**.
- Implemented workspace context and persistent knowledge using **PostgreSQL and pgvector** for multi-step agent workflows.
- Built structured output parsing and runtime validation to reliably convert LLM responses into executable agent actions.
- Designed the runtime so agents reason about **artifacts and available tools**, while execution and state management remain controlled by the runtime.

CRM [LINK](#)

- Built a full-stack **CRM platform** for managing contacts, pipelines, stages, custom fields, tasks, notes, and activity tracking.
- Designed PostgreSQL data models and backend APIs for **multi-entity relationships, pipeline workflows, and user-managed CRM data**.
- Built reusable frontend components with **Nuxt/Vue, Pinia, and Tailwind CSS**, including data tables, filters, forms, and workflow interfaces.
- Implemented **outreach sequences and follow-up task management** to support structured lead engagement workflows.

AI Automation Pipelines [LINK](#)

- Built automated pipelines for **Reddit lead generation and startup job discovery**, combining data ingestion, background processing, LLM analysis, validation, and structured storage.
- **Reddit**: RSS ingestion → post processing → Ollama lead scoring → lead analysis → dashboard, with background workers and rate-limit handling.
- **Job Search**: job ingestion → LLM extraction → validation/repair → data normalization → database → AI job-fit scoring using technology, company, and compensation signals.
- Built reliable processing workflows around **LLM latency, malformed outputs, failed requests, normalization, and long-running background jobs** using Node.js and PM2.
